SIÂN KEARLEY

ANDROID SOFTWARE ENGINEER | KOTLIN • JETPACK COMPOSE • MOBILE SDKs • FINTECH

Leeds, UK • Open to UK remote / London ad-hoc • LinkedIn • GitHub

PROFILE

Android-focused Senior Associate Software Engineer building Kotlin products and SDKs in payments/FinTech. Experienced in Jetpack Compose, mobile architecture, public API design, automated testing, CI/CD and production support. Currently working on a new Android Mobile Checkout SDK, collaborating closely with iOS, product and engineering peers to shape requirements and deliver maintainable, well-tested customer-facing capabilities. Brings a product mindset alongside hands-on engineering, with experience mentoring engineers, leading a frontend community of practice and contributing across Android, React Native, Web and backend Kotlin services.

CORE SKILLS

Android	Kotlin, Jetpack Compose, Android SDK development, ViewModel, coroutines, UI/instrumented testing
Architecture	Modular design, orchestration, component/handler patterns, repositories/services, public APIs, HLD/LLD
Quality & Delivery	JUnit, Compose testing, JaCoCo, Bitrise, GitHub Actions, Jenkins, CI/CD, production releases
Broader Engineering	Kotlin backend services, React, TypeScript/JavaScript, React Native, REST APIs, Docker, Kubernetes, AWS, Redis, DynamoDB, Cassandra

EXPERIENCE

Worldpay | Senior Associate Software Engineer — Android / Mobile SDKs • *Oct 2026–Present*

Software Engineer — Android / Mobile SDKs • *Sep 2023–Oct 2026*

Graduate Software Engineer • *Sep 2021–Sep 2023*

- Building a new native Android Mobile Checkout SDK in Kotlin, including Card, CVC-only and Google Pay flows, with an emphasis on a clean public API and alignment with the iOS SDK.
- Designed and implemented orchestration and modular component architecture using dedicated payment handlers, a component registry/factory and service/repository boundaries to reduce coupling and make payment flows easier to extend and test.
- Developing polished Jetpack Compose components and state-driven ViewModels, with unit and instrumented test coverage across payment flows and UI behaviour.
- Improved Android quality and delivery workflows by integrating JaCoCo coverage with CI, diagnosing Bitrise/emulator test stalls and API-level differences, and resolving build/repository authentication issues.
- Contribute to production releases and on-call support, investigating alerts and incidents across payment services while assessing customer impact and coordinating follow-up.
- Maintain and contribute across Android, React Native, Web and iOS-facing SDK work, giving a broader view of cross-platform API consistency and developer experience.
- Previously helped build a Kotlin onboarding service: established tenancy groundwork and initial APIs to reduce manual merchant onboarding.
- Mentor a graduate engineer through Kotlin, Compose and SDK architecture; explain design decisions and break complex implementation work into manageable steps.

- Founded and lead a Frontend Community of Practice, organising sessions, maintaining the backlog and creating a forum for engineers to share techniques and improve engineering practices.

SELECTED ENGINEERING IMPACT

- Mobile checkout architecture: moved payment-specific behaviour behind focused handlers/components rather than a generic payment path, making responsibilities clearer and supporting future payment-method growth.
- Testing reliability: investigated suite-only failures and hanging instrumented tests, improved test isolation and reusable Compose test abstractions, and brought coverage execution into the CI pipeline.
- Cross-functional delivery: work directly with Product, technical leads and iOS engineers on API naming, component boundaries, behaviour parity and implementation trade-offs.

PREVIOUS EXPERIENCE

Roche | Technical Support Specialist - Diabetes Care • Apr 2017-Aug 2021

- Diagnosed hardware and software issues across diabetes-management devices and supporting applications, developing structured troubleshooting and root-cause analysis skills.
- Supported patients and healthcare professionals in a regulated environment, translating complex technical problems into clear guidance while prioritising accuracy, escalation and customer impact.

Case London Ltd. | Online Customer Service Manager / E-Commerce & Social Media Administrator • Mar 2014-Apr 2017

- Managed customer-facing e-commerce operations across the company website and online concessions, maintaining product content, pricing, stock information and order fulfilment.
- Owned customer issues end-to-end across phone, email and social channels, building strong prioritisation, stakeholder communication and digital customer-journey awareness.

EDUCATION & CERTIFICATION

The Open University | Degree, 2:1 | 2016–2020
Certified SAFe 5 Advanced Scrum Master (5.1)
